

Program 1:

Different forms of if statements (if, else and elseif):

```
<?php
$mark=75;
if($mark<35)
echo "fail";
else if($mark<=50)
echo "the grade is third class ";
else if($mark>=51 && $mark<=74)
echo "the grade is Second class ";
else if($mark>=75 && $mark<=90)
echo "the grade is First class class ";
else
echo"The Grade is Distinction ";
echo "The Mark is $mark";
?>
```

Program 2:

Various loop control structures:

For:

```
<?php
for($i=0;$i<5;$i++)
{
$product=10*$i;
echo "The Product of 10*$i $product <br/>";
}
?>
```

Foreach:

```
<?php
$animal_List=array("Lion","dog","wolf","leopard","tiger");
foreach ($animal_List as $array_List)
{
echo $array_List . "<br>" ;
}
?>
```

While:

```
<?php
$i=1;
echo"The Number from 1 to 10 <br>";
while($i<=10)
{
echo $i . "<br>";
$i++;
}
?>
```

Program 3:

Case control structure (Switch):

```
<html>
<body>
<center>
<h1> ARITHMETIC OPEARTIONS DEMO USING SWITCH CASE IN PHP </h1>
<label>
1-addition
2-subtraction
3-multiplication
4-division
</label>
<form method="post">
<input name="num1" placeholder="Enter the Value 1 : "/><br>
<input name="num2" placeholder="Enter the Value 2 : "/><br>
<input name="option" value="" placeholder="option"/><br>
<input type="submit" name="submit" value="submit" /><br>
</form>
<?php
if(isset($_POST['submit']))
{
$a=$_POST['num1'];
$b=$_POST['num2'];
$ch=$_POST['option'];
switch($ch)
{
case 1:
$r=$a+$b;
echo "Addition of ".$a."+ ".$b." = ".$r;
break;
case 2:
$r=$a-$b;
echo "Subtraction of ".$a."- ".$b." = ".$r;
break;
case 3:
$r=$a*$b;
echo "Multiplication of ".$a."* ".$b." = ".$r;
break;
case 4:
$r=$a/$b;
echo "Division of ".$a."/ ".$b." = ".$r;
break;
default:
echo "Invalid option.....";
}
}
?>
</center> </body> </html>
```

Program 4:

String functions (chr, ord, str_shuffle, str_replace, strcmp and substr):

```
<html>
<body>
<?php
//chr()
echo "Your Character is = 74 <br>";
echo "By using 'chr()' function Your value is --->".chr(74)."<br>";
//ord()
echo "<br>Ascii Value of h is --->".ord("h")."<br><br>";
//str_shuffle()
$string="Jamal Mohammed College ";
echo "Before Using 'str_shuffle' --->".$string."<br>";
echo "After Using 'str_shuffle' --->".str_shuffle($string)."<br><br>";
//strcmp()
echo "if 'strcmp()' return 0 if two strings are equal ---
>".strcmp("Fardeen","rilvan")."<br><br>";
//substr()
$string="III BSC Students ! ";
echo "Sub String of III BSC Students ---
>".substr($string,4)."<br><br>";
//str_replace()
echo "replace the string --->".str_replace("III BSC", "BSc-
Cs",$string);
?>
</body>
</html>
```

Program 5:

Arrays (Sorting of names):

```
<?php
$arr=array("Rilvan","Fardeen","Rayan","Hasan");
// sorting array using 'sort' function
print_r($arr);
sort($arr);
echo "<br>";
print_r($arr);
echo "<br>";
// reverse sorting array using 'rsort' function
rsort($arr);
print_r($arr);
?>
```

Program 6:

Arrays (Splitting and Merging):

```
<?php
$big_array = array("A1", "B1", "C1", "A2", "B2", "C2");
$sub_array = array_slice($big_array, 0, 4);
echo "we want the subarray to contain the first four elements from
the big_array<br>";
echo "<pre>" . print_r($sub_array, true) . "</pre>";
$array1["A"] = "AAA";
$array1["B"] = "BBB";
$array2["A"] = "aaa";
$array_12 = array_merge($array1, $array2);
echo "when there is two identical strings keys, the last will
overwrite the first elements<br>";
echo "<pre>" . print_r($array_12, true) . "</pre>";
$array11 = array("A1", "B1", "C1");
$array22 = array("A2", "B2", "C2");
$array_1212 = array_merge($array11, $array22);
echo "when there is two identical strings keys, they will be given
another key value<br>";
echo "<pre>" . print_r($array_1212, true) . "</pre>";
?>
```

Program 7:

Function (Finding salary):

```
<html>
<head>
<title>PHP program to find the gross salary of an employee</title>
</head>
<body>
<form method="post">
<label>Enter basic salary:</label>
<input type="text" name="salary" placeholder="Enter basic salary" /><br>
<input type="submit" name="submit" value="Submit" />
</form>
<?php
if (isset($_POST['submit'])) {
    $basic_salary = $_POST['salary'];
    $dallowance = 0.4 * $basic_salary;
    $house_rent = 0.2 * $basic_salary;
    $gross_salary = $basic_salary + $dallowance + $house_rent;
    echo "Basic Salary: $basic_salary /- <br>";
    echo "Dearness Allowance: $dallowance /- <br>";
    echo "House Rent: $house_rent /- <br><br>";
    echo "Gross Salary: $gross_salary /-";
}
?>
</body>
</html>
```

Program 8:

Text Fields, Check Boxes, List Boxes, Buttons and Radio Buttons (Registration Form):

```
<html>
<head>
<title>Registration</title>
<style>
.main {
width: 50%;
margin: auto;
border: 4px solid black;
padding: 1em;
}
</style>
</head>
<body>
<div class="main">
<form method="post" action="welcome.php">
<center>
<h1>Student Registration</h1>
<hr>
<input type="text" name="fname" placeholder="FIRST NAME"><br>
<input type="text" name="mname" placeholder="MIDDLE NAME"><br>
<input type="text" name="lname" placeholder="LAST NAME"><br>
<input type="email" name="email" placeholder="EMAIL"><br>
<input type="text" name="mobile" placeholder="MOBILE"><br>
<input type="text" name="city" placeholder="CITY"><br></center>
<hr>
<h4>GENDER</h4>
<input type="radio" name="gender" value="Male">Male
<input type="radio" name="gender" value="Female">Female<br>
<hr>
<h4>HOBBIES</h4>
<input type="checkbox" name="hobby[]" value="Cricket">Cricket
<input type="checkbox" name="hobby[]" value="Football">Football
<input type="checkbox" name="hobby[]" value="Chess">Chess<br>
<hr>
<center>
<input type="password" name="pass" placeholder="Password"><br>
<input type="submit" name="submit" value="Register">
</center>
</form>
</div>
</body>
</html>
```

Welcome.php:

```
<?php
if(isset($_POST['submit'])){
    $fn=$_POST['fname'];
    $mn=$_POST['mname'];
    $ln=$_POST['lname'];
    $em=$_POST['email'];
    $mob=$_POST['mobile'];
    $city=$_POST['city'];
    $gender=$_POST['gender'];
    $hobbies=$_POST['hobby'];
    $pass=$_POST['pass'];
    echo "First Name: $fn<br><br>";
    echo "Middle Name: $mn<br><br>";
    echo "Last Name: $ln<br><br>";
    echo "Email: $em<br><br>";
    echo "Mobile: $mob<br><br>";
    echo "City: $city<br><br>";
    echo "Gender: $gender<br><br>";
    echo "<h3>Hobbies</h3>";
    foreach($hobbies as $hobby) {
        echo "$hobby<br>";
    }
}
?>
```

Program 9:

Data Validation (Checking Age):

```
<html>
<body bgcolor="teal">
<center>
<form method="post">
<h2>Enter your age:</h2>
<input type="number" name="age" placeholder="Enter your
age"/><br><br> <input
type="submit" name="submit" value="SUBMIT"/>
</form>
</center>
</body>
<?php
if(isset($_POST['submit'])){ $age=$_POST["age"];
if($age<18){
echo '<script>alert("You are below 18, so not eligible to
watch");</script>';
}
else
echo '<script>alert("You are eligible to watch");</script>';
}
```

Program 10:

Javascript for client side data validation (Checking Date):

```
<!DOCTYPE html>
<html>
<head>
<title>III BSc.CS</title>
</head>
<body style="text-align:center;background-color:teal;">
<h1 style="color:white;">How to check if a date is valid or not
using JavaScript?</h1>
<hr>
<p style="color:white;font-size:15px;font-weight:bold">Click On
the button to check the
validity of the date<br></p>
<button onclick="bsc_fun()">Click here</button>
<script>
function bsc_fun() {
var inputDate = new Date("2023/13/31");
if (!isNaN(inputDate.getTime())) {
alert("The date is valid!");
} else {
alert("The date is not valid!");
}
}
</script>
</body>
</html>
```

Program 11:

Cookies:

```
<?php
setcookie("user", "IIIBSC");
?>
<html>
<body>
<?php
if(isset($_COOKIE["user"])) {
    echo "Cookie value: " . $_COOKIE["user"];
} else {
    echo "Sorry, cookie is not found";
}
?>
</body>
</html>
```
